SUMMARY

Full-stack web developer experienced working with Linux/Ubuntu, Windows and MACos, setting up different IDEs with various code editors like IntelliJ, Visual Studio and VS Code. Actively taking Pluralsight OO design patterns. Strongly committed to building reliable maintainable code using any framework. Successfully refactor projects to be used with new version releases. Led all planning and designing of Coat & Code web applications and projects.

TECHNICAL SKILLS

Softwares/Platforms: Django, Laravel, React, NoSQL, MySQL, MongoDB, AWS, Oracle, Git, JQuery, Node, handlebars.
Software Languages: ES6, JavaScript, Python, Java, PHP, C#, HTML5, CSS, C++

PROJECTS

taco-stand | **github.com/wilmer88/taco-stand** | **https://taco-stand.herokuapp.com**
- Gives business a template to sell their products, where foodies can pre order and make online payments, eliminating having to wait in line and the inevitable prepping wait time that comes after placing an order; helps to eliminate the need to use man/ woman power to take orders and receive payments; vanishes all check delivery times, since paid orders are instantly available to kitchen staff.
- Solely responsible for the application idea, the building of all features; in charge of creating, designing and finding solutions, also for writing all of the backend and frontend source code and launching the application.
- Technologies used: React/JSX, React Router, Express, Node, MongoDB, Bulma, ES6, Bcrypt, JWT, Mongoose, Axios, Stripe Checkout, JSON Web Token and more, please see dependencies.

Web-Inventory | **github.com/wilmer88/tool-inventory** | **https://tool-inventory.herokuapp.com**
- App enables employees' mobile devices to document items, their location, count, specifications, and the name of the employee that was assigned to count those items, filtering items by department, facilitating a speedy and accurate inventory count.
- Singly responsible for inception of application by writing all the source code, creating the front end design, doing all testing, building all the features and finally launching the app.
- Built with Foundation css framework, Handlebars, HTML, JawsDB MySQL and Sequelize.

ga_dev | **github.com/wilmer88/err-help** | **https://ga-devs1.herokuapp.com**
- Full CRUD application where jr developers can post their computer errors and solutions. Created for developers to save their solutions, their knowledge and ask "dumb questions" all connected to a live database. Works well on desktop, with mobile responsiveness. Future development is pending until further notice.
- Lone creator of all backend and frontend code, the view all tab functionality , both edit and delete page functionalities are done. Please see my portfolio for my other projects.
- Project uses: Bootstrap, Django/MVC/ORM, SQLite3, pgAdmin, AWS, and Heroku.

Owner
2020 – Present
Coat & Code LLC
Rome, Woodbine Ave
In charge of giving a price for job bids, budgeting and negotiating counter offers, analyzing and comparing offers to other alike jobs, for price matching; ensuring fair market price for both client Coat & Code.
